

Enterprise Solutions lead to... Quality Management

Success is not one dimensional or linear. CALIBRE can provide you a proven and tailored solution to achieve quality. With our “holistic” assessment process we integrate solutions to include people, processes and technologies. Chaos becomes endurable in today’s market place. We set you on a path to “resiliency” and sustainable revenue growth through a structured enterprise solution development process.

Do you find you and your company are constantly reengineering? Chasing better products/solutions and trying to hold onto your current client base while securing new ones?

Can you call your people, processes and technology flexible and adaptable to the changes in market demands and unpredictable environments of constant economic and environmental change?

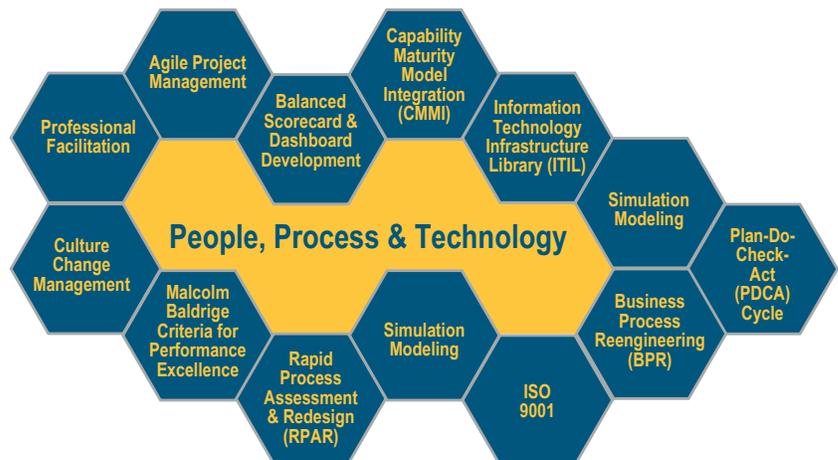

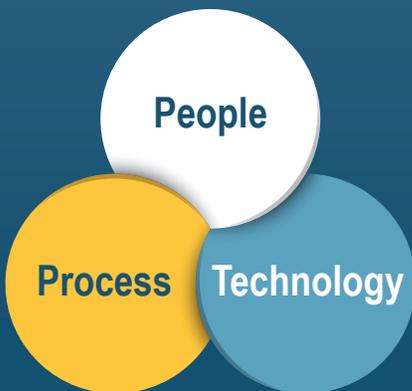

Your company’s survival depends on a holistic understanding of what, who, and why. Yet you still pursue symptoms of bad performance and increasing costs with reorganization, new hires and technology panaceas.

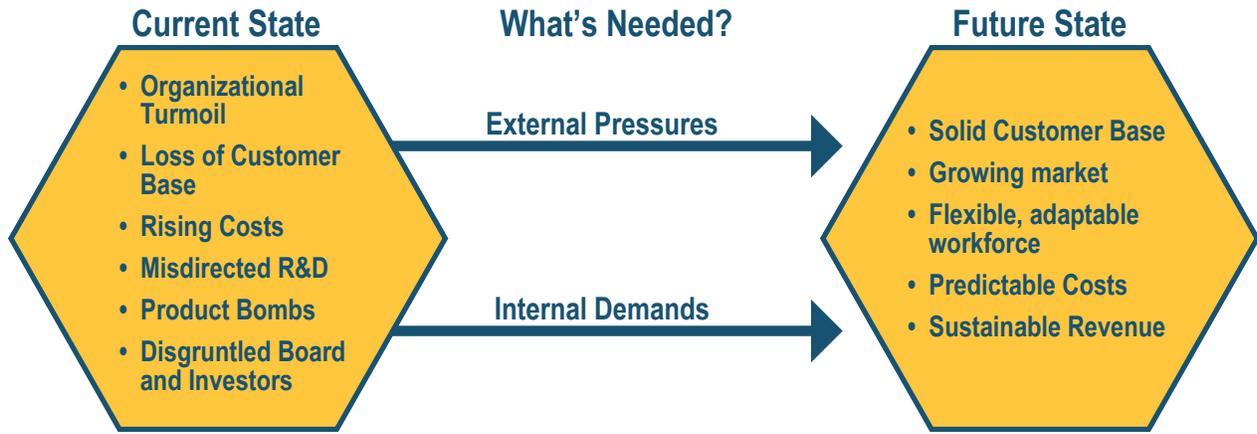

CALIBRE is your partner to quality management. We offer you calm and reassurance through a holistic approach of proven methodologies to set your organization on a path of flexible and adaptable business enterprise solutions.

CALIBRE can perform a holistic analysis of your business operations and provide you with a snapshot of the quality of your performance. Our team of experts can help you

determine the right solution for you through our Integrated Deployment Model (IDM). The IDM model starts with a toolkit of the best-of-breed industry tools and techniques.

Our professionals apply the right tools and techniques to develop enterprise solutions with the systematic organization in mind – people, processes and technology.

>> **Starting With the End In Mind**

CALIBRE designs a tailored IDM approach for each client to support transformation projects and initiatives. Our approach starts with the organizational leaders and stakeholders. We ask them what they desire for their future state. Next, before we gather data, we ask how they perceive the current state and what they believe is needed to bridge the gap to attain improvements.

>> **Integrated Deployment Model**

Despite technological upgrades and training programs most organizations continue to identify and resolve issues with the same familiar cycle, “Find – Fix – Repeat.” Consequently, the risks and problems remain for the long term.

Our team of professionals apply the IDM to your unique business needs to achieve the future state you aspire.

Our IDM applies the right analytic tools, performance improvement methodologies to your organization’s people, processes and technologies to achieve the best solutions for long-term quality management.

>> **Redefining Organizational Culture**

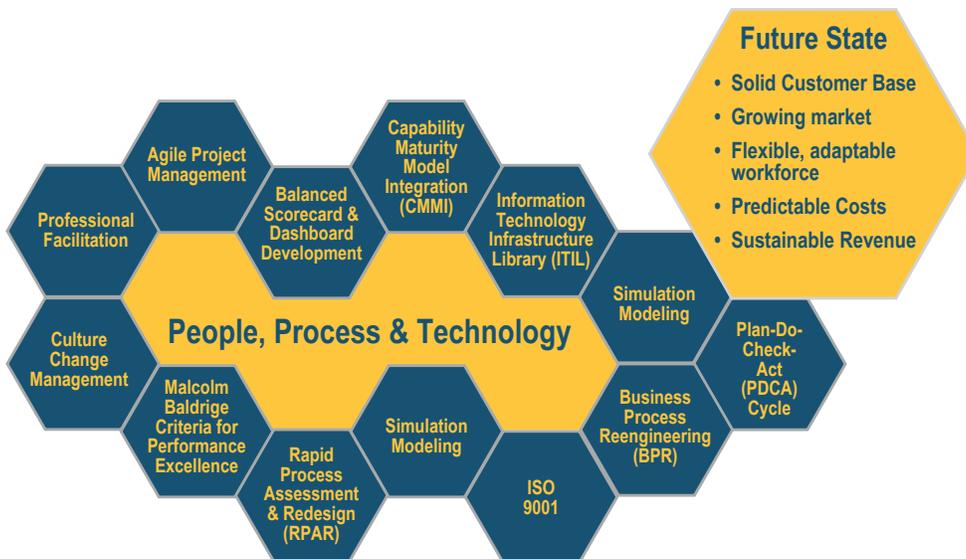

A culture of quality is imperative to successful implementation of quality management. CALIBRE provides our clients with support in establishing a culture of accountability throughout the organization. Our IDM uses a blend of GE’s Change Acceleration Process and Kotter’s Eight-Step Process approaches throughout the transition life cycle. As part of our program, CALIBRE facilitates change management strategy development; identifies quick wins and provides change management training modules, encouraging employee buy-in and understanding.
